that cannot be seen or naturally detected*

Environmental Policy

Control Equipment is committed to minimising the impacts of its activities on the environment. In stating this commitment Control Equipment recognises that it has an ethical and legal responsibility to protect and enhance the environment and that this responsibility extends to Control Equipment's staff, agents and visitors.

Control Equipment will, as a minimum, meet its statutory requirements under the relevant legislation.

Toward the fulfilment of its stated commitment Control Equipment will:

- a. promote awareness and understanding of and responsibility for environmental issues
- b. implement a company-wide Environmental Management System that allows significant environmental impacts to be identified and managed while also helping to foster implementation of environmentally responsible practices
- c. set objectives and targets for those activities which significantly affect the environment and measure performance against those targets over time
- d. where necessary, refine practices and procedures to ensure the fulfilment of stated objectives
- e. minimise waste production and pollution, as far as practicable and seek to re-use and recycle materials where possible
- f. seek to reduce consumption of water and energy by promoting water and energy efficiency measures
- g. communicate its environmental performance both within the Company and the community
- h. ensure staff and visitors are informed and aware of their roles in implementing its environmental policy

Control Equipment expects its staff and visitors to comply with the principles of this policy and to support fulfilment of the Control Equipment's stated environmental management objectives. To this end staff and visitors are expected to familiarise themselves with and support the efficient implementation of the Control Equipment's Environmental Management System, and to take appropriate action to ensure that their activities are carried out in an environmentally friendly manner.

Individuals and/or groups who participate in activities that contravene this policy or the governing legislation may find themselves subject to disciplinary and/or legal proceedings. Individuals should be aware that they can be personally pursued for crimes against the environment and that penalties for crimes against the environment include significant fines and incarceration.
